

Whitepaper

League was developed for betting facilities and sports betting.

In the lead-up to the FIFA World Cup, we create a currency, which will yield profit to our investors. Our main bet is marketing.

We want to take on a good percent of the investment market

We create a useful tool to manage operations directly through a smartphone right on the stadium during a match.

Thanks to our community, we will increase awareness among bookmakers and betting men

Our client will capitalize not only on successful predictions, but also on increase in the coin rate and PoS mining

We have great ideas that will lead our coin to the top by capitalization already this year

Through the Leaguecoin payment system every holder will be able to place a secure and anonymous bet, transfer funds and wager.
